FETKER

Premium transition lipids

Product Description

Blend of palm fatty acids and saponified vegetable oils, with a high oleic acid content.

Its unique formulation with bypass Omega-3 and Omega-6 Essential Fatty Acids (EFAs) helps prevent delivery-related problems and helps stimulate milk production in post-delivery stages.

Product Advantages

Fetker's formula with essential fatty acids Omega-3 and Omega-6 offers widely-studied benefits for pre and post-partum cattle, such as:

- Resumption of cyclicity in an earlier post-partum period.
- Reduction of uterine abnormalities.
- Increased profitability of the herd during the cycle.

Use

Feedi additive for dairy cattle in the transition period (pre and post-partum).

Fatty Acid Profile	
Palmitic Acid	10% max
Oleic Acid	24% min
Linoleic Acid	30% min
Linolenic Acid	4% min

Instructions for use

For best results mix with a properly balanced ration.

Dosage Recommendations

Consult your Zootechnician Veterinarian.
